

FARM BUSINESS PLAN

Farm Purpose & Goal

Establish a productive part-time farm while continuing to work as a registered nurse, with the long-term goal of building a sustainable agricultural operation that generates meaningful income.

Farming Experience

I have 8+ years of hands-on farming experience on my family farm in my home country, including 2 years managing farm operations. My experience includes vegetable production, livestock care, farm maintenance, and agricultural equipment operation and maintenance.

Planned Production

- Grow vegetables and seasonal crops
- Raise chickens for eggs and/or meat
- Raise goats
- Gradually expand production based on available land, resources, and market demand

Farming Practices

I plan to use responsible and sustainable farming practices, including proper soil management, responsible animal care, efficient use of water and resources, and regular maintenance of farm equipment.

Income Plan

I plan to sell vegetables, eggs, livestock, and other farm products through appropriate local markets and direct sales. My goal is for farming to generate approximately 20%–60% of my personal income while I work part-time on the farm.

Management & Skills

I will manage the farm part-time while working as an RN. My additional skills include woodworking, construction, mechanical and electrical work, gasoline/diesel automotive maintenance, agricultural equipment maintenance, general repairs, and advanced computer skills.

Long-Term Goal

Build a financially sustainable farm operation and gradually increase production and profitability as the farm becomes established.
